

EuroSoft® connect for BlueLine - Android and iOS

Benefits

- Indication of the live measured values as value and as line chart
- Live transmission of measured values to smartphone or tablet via Bluetooth®
- Fast transmission of final measurement results via QR code
- Data logger function with the possibility to share the log file in CSV format, addition of company logo and signature field
- Free and suitable for many measuring instruments of the BlueLine series
- Creation of professional measurement records (PDF) with customer data and signature

Application

For processing and visualisation of measurement results of BlueLine measuring instruments. Ideal for long-term measurements and adjustments as well as for use of the data logger function for professional, comprehensive documentation of results for customers. The EuroSoft® connect software allows you to transmit measured values to smartphones or tablets. The data can then be further processed or sent via e-mail. The evaluation software is suitable for BlueLine measuring instruments and can be used on iOS or Android operating systems.
